Project Design Phase-II
Data Flow Diagram & User Stories

Date	14/10/2026
Team ID	6ab4a90f0fc666a751b44650
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

The project automates the triage and classification of school IT incident tickets in ServiceNow using Flow Designer. When a student or teacher submits a ticket with only their name and a short description, Flow Designer automatically evaluates the text for keywords, assigns the appropriate Category and Subcategory according to dependent dictionary rules, and sends an automated confirmation email to the caller.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow Admin	Update Set Setup	USN-1	As a ServiceNow administrator, I can create and set a dedicated Local Update Set (Project Update Set) so that all configurations and flows are captured for deployment.	Update set is created in Global scope, marked as In progress, and set as the Current update set.	High	Sprint-1
ServiceNow Admin	Custom Table Creation	USN-2	As a ServiceNow administrator, I can create a custom table Incident WorkFlow (u_incident_workflow) without a default module to store ticket records in a standardized format.	Custom table u_incident_workflow is successfully created with Create module unchecked.	High	Sprint-1
ServiceNow Admin	Auto-Numbering Setup	USN-3	As a ServiceNow administrator, I can configure auto-numbering on the custom table so that every ticket gets a unique, sequential incident number.	Auto-numbering is enabled with Prefix INC, 5 digits, and base number 500 (e.g., INC00509).	High	Sprint-2
ServiceNow Admin	Schema Configuration	USN-4	As a ServiceNow administrator, I can add required fields (Caller, Category, Subcategory, Short Description, Description, State, Assigned group, Assigned to) via Form Designer.	All fields are added with correct data types (Reference, Choice, String) and visible on the form layout.	High	Sprint-1
ServiceNow Admin	Dependent Choice Fields	USN-5	As a ServiceNow administrator, I can configure dictionary dependency on Subcategory based on Category so choices adapt dynamically.	Subcategory choice list dynamically filters choices based on Category (Wi-Fi $\rightarrow$ Network, Projector $\rightarrow$ Hardware).	High	Sprint-1
Student / Teacher	Ticket Submission	USN-6	As a requester (student or teacher), I can submit a support ticket by only entering my name and Short Description without having to select technical categories.	Requester can submit the form with only mandatory Caller and Short Description populated.	High	Sprint-1
ServiceNow Developer	Flow Trigger Setup	USN-7	As a ServiceNow developer, I can configure a Flow Designer trigger on u_incident_workflow when a record is Created where Category is empty.	Flow triggers automatically on record creation only when Category is empty, preventing infinite update loops.	High	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow Developer	Keyword Parsing Logic	USN-8	As a ServiceNow developer, I can create conditional Flow Logic (If / Else If) evaluating Short Description keywords to classify incidents automatically.	Flow checks Short Description for Wi-Fi/Network, Projector, Forgot password, and Slow computer.	High	Sprint-2
ServiceNow Developer	Automated Record Update	USN-9	As a ServiceNow developer, I can add Update Record actions in Flow Designer to automatically populate Category and Subcategory.	Ticket record automatically updates with valid matching Category and Subcategory without manual IT intervention.	High	Sprint-2
Student / Teacher	Email Notification	USN-10	As a caller, I receive an automated email confirmation immediately after logging my ticket so that I know my request has been received.	Caller receives an acknowledgment email addressed to their email ID with ticket details and confirmation body.	High	Sprint-2
QA / IT Lead	End-to-End Testing	USN-11	As an IT support lead, I can test sample tickets (e.g., "WiFi not working in library", "Projector not turning on") to verify auto-classification accuracy.	Saved and reloaded form records automatically display the correct Category and Subcategory values.	High	Sprint-2
ServiceNow Admin	Update Set Export	USN-12	As a ServiceNow administrator, I can mark Project Update Set as Complete and export it to an XML file for deployment.	Update set state changes from In progress to Complete, and Export to XML downloads the XML payload.	High	Sprint-2

Project Outcome

The workflow demonstrates automated incident logging, keyword-based natural language categorization, dictionary-level data integrity via dependent choices, zero-touch caller notification via Flow Designer data pills, and clean migration packaging using ServiceNow Update Sets.
